This verification form is valid for up to five (5) years provided no material changes have been made to the structure or inaccuracies found on the form.

NACI	H F	or		f screws, nails, adhesives, other deck fastening system or truss/rafter spacing that is shown to have an equivalent stance than 8d common nails spaced a maximum of 6 inches in the field or has a mean uplift resistance of at least
				d Concrete Roof Deck.
				or unidentified.
	Ш	G.	No attic a	ccess.
4.		et c	of the insid	achment: What is the <u>WEAKEST</u> roof to wall connection? (Do not include attachment of hip/valley jacks within a or outside corner of the roof in determination of WEAKEST type)
	Ш	A.	Toe Nails	Truss/rafter anchored to top plate of wall using nails driven at an angle through the truss/rafter and attached to the top plate of the wall, or
				Metal connectors that do not meet the minimal conditions or requirements of B, C, or D
	Mir	nim	al conditio	ns to qualify for categories B, C, or D. All visible metal connectors are:
			\times	Secured to truss/rafter with a minimum of three (3) nails, and
			\boxtimes	Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a ½" gap from the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible severe corrosion.
	\times	B.	Clips	
			\boxtimes	Metal connectors that do not wrap over the top of the truss/rafter, or
		_		Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter and does not meet the nai position requirements of C or D, but is secured with a minimum of 3 nails.
	_	C.	Single Wi	Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side.
	Ш	D.	Double W	Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, or
	_			Metal connectors consisting of a single strap that wraps over the top of the truss/rafter, is secured to the wall on both sides, and is secured to the top plate with a minimum of three nails on each side.
			Structural Other:	Anchor bolts structurally connected or reinforced concrete roof.
				or unidentified
	Ш	Н.	No attic a	ccess
5.				What is the roof shape? (Do not consider roofs of porches or carports that are attached only to the fascia or wall of over unenclosed space in the determination of roof perimeter or roof area for roof geometry classification).
		A.	Hip Roof	Hip roof with no other roof shapes greater than 10% of the total roof system perimeter.
	\boxtimes	В.	Flat Roof	Total length of non-hip features: feet; Total roof system perimeter: feet Roof on a building with 5 or more units where at least 90% of the main roof area has a roof slope of less than 2:12. Roof area with slope less than 2:12 sq ft; Total roof area sq ft
		C.	Other Roo	
6.	Sec	A. B.	SWR (also sheathing dwelling to No SWR.	r Resistance (SWR): (standard underlayments or hot-mopped felts do not qualify as an SWR) called Sealed Roof Deck) Self-adhering polymer modified-bitumen roofing underlayment applied directly to the or foam adhesive SWR barrier (not foamed-on insulation) applied as a supplemental means to protect the from water intrusion in the event of roof covering loss.

7. Opening Protection: What is the weakest form of wind borne debris protection installed on the structure? First, use the table to determine the weakest form of protection for each category of opening. Second, (a) check one answer below (A, B, C, N, or X) based upon the lowest protection level for ALL Glazed openings and (b) check the protection level for all Non-Glazed openings (.1, .2, or .3) as applicable.

Opening Protection Level Chart			Glazed Openings				Non-Glazed Openings	
openi form	an "X" in each row to identify all forms of protection in use for each ng type. Check only one answer below (A thru X), based on the weakest of protection (lowest row) for any of the Glazed openings and indicate eakest form of protection (lowest row) for Non-Glazed openings.	Windows or Entry Doors	Garage Doors	Skylights	Glass Block	Entry Doors	Garage Doors	
N/A	Not Applicable- there are no openings of this type on the structure		X	X	X		X
